

Table of Contents

Foreword	xiii
Preface	xv
Chapter 0 How We Got Here	1
0.1 Computing in the 21st Century	2
0.2 Vannevar Bush and the MEMEX	2
0.3 Alan Turing	2
0.4 The von Neumann Architecture.....	2
0.5 Alternatives to the von Neumann Architecture	2
0.6 Moore’s Law	2
0.7 No Such Thing as a Free Lunch	2
0.8 “The Phone” – Smaller , Faster, More Connected.....	2
0.9 “The Cloud” – Bigger, Faster, More Connected.....	2
0.10 Summary.....	2
0.11 References.....	2
Chapter 1 Representing Information	3
1.1 Numbers as Abstractions.....	3
1.2 Positional Number Systems	4
1.3 Other Bases	6
1.4 Binary Numbers.....	6
1.4.1 Binary Integers	7
1.4.2 Why Binary?	9
1.4.3 Converting Decimal to Binary	10
1.4.4 Finite Precision Arithmetic – How High Can We Count?.....	10
1.4.5 Binary Arithmetic – Addition	12
1.4.6 Negative Numbers – Two’s Complement.....	14
1.4.7 Binary Fractions	18
1.4.8 Hexadecimal Numbers as Shorthand.....	19
1.5 Very Large and Very Small Numbers	19
1.5.1 Scientific Notation	20
1.5.2 Floating-Point Numbers	20
1.5.3 Normalized Numbers.....	22

Computing Concepts for Information Technology

1.5.4 Precision of Floating-Point Numbers	23
1.5.5 Special Values in IEEE 754	25
1.6 Representing Symbols – Encoding Systems	25
1.6.1 ASCII and ISO 8859	26
1.6.2 Unicode	28
1.6.3 UTF-8	30
1.7 Sounds, Images, and Video	31
1.7.1 Sounds	31
1.7.2 Images.....	33
1.7.3 Video.....	37
1.8 Summary.....	38
1.9 References.....	40
Chapter 2 Digital Logic.....	41
2.1 Boolean Algebra: The Logic of True and False	41
2.2 Truth Tables	42
2.3 Functions of One Variable and the NOT Function	43
2.4 Functions of Two Variables	44
2.5 Boolean Algebra, Switches, and Claude Shannon’s Master’s Thesis	46
2.5.1 Electric Circuits, Switches, and Transistors.....	46
2.5.2 Digital Logic Gates	48
2.6 Digital Logic Building Blocks: Combinational Circuits	50
2.6.1 Adders.....	51
2.6.2 Combinational Circuits and Gate Delay	53
2.6.3 Decoders, Multiplexors, and other Building Blocks.....	54
2.6.4 Shifters.....	55
2.7 NAND and NOR: Circuit Equivalence and Functional Completeness.....	56
2.8 Sequential Circuits and Memory.....	59
2.8.1 The S-R Latch	59
2.8.2 The Clocked D-latch.....	60
2.8.3 Edge-Triggered Devices	61
2.9 Clocks and Synchronous Circuits.....	61
2.10 Registers	63
2.11 Summary.....	64
2.12 References.....	65

Table of Contents

Chapter 3 The CPU and Memory	67
3.1 The von Neumann Architecture.....	68
3.1.1 Instruction Set Architecture	69
3.1.2 Microarchitecture	70
3.2 The “Little Man” Computer	71
3.2.1 The Instruction Cycle.....	72
3.2.2 Programming the Little Man Computer.....	73
3.2.3 Problems with the Little Man computer.....	73
3.3 Let’s Build a CPU – the Tiny Binary Computer	74
3.3.1 Architecture of the TBC.....	74
3.3.2 A One Bit ALU	75
3.3.3 Functions of the ALU	76
3.3.4 Testing the ALU Output	78
3.3.5 The Registers and Datapath.....	80
3.3.6 The TBC Datapath Cycle	83
3.4 Instruction Formats and Addressing Modes	89
3.4.1 Instruction Formats	89
3.4.2 Addressing Modes	90
3.5 Memory.....	93
3.5.1 Memory Technology	93
3.5.2 Memory Organization and Addressing	96
3.5.3 Error Detection and Correction.....	99
3.5.4 Cache Memory	101
3.5.5 Stacks and Stack Pointer	103
3.6 Modern CPU Architecture.....	106
3.6.1 RISC Computers	108
3.6.2 Hardwired Control Units.....	109
3.6.3 Pipelined execution.....	109
3.6.4 Many Registers	111
3.6.5 Superscalar Architecture.....	112
3.6.6 Multiple Cores	112
3.7 Summary.....	113
3.8 References.....	114
Chapter 4 Input and Output.....	117

Computing Concepts for Information Technology

4.1 Computer Peripheral Concepts	117
4.1.1 Input, Output, and Storage	117
4.1.2 Programmed I-O	117
4.1.3 Interrupt-Driven I-O	117
4.1.4 Direct Memory Access I-O	117
4.1.5 Scheduling and Device Priority	117
4.2 Storage Devices	117
4.3 Displays and Printers	117
4.4 Other Devices	117
4.5 Summary	118
4.6 References	118
Chapter 5 Data Communications and Networks.....	119
5.1 Messages, Protocols, and Connections	119
5.2 Protocol Stacks – OSI and TCP	119
5.3 Physical Transmission.....	119
5.4 Ethernet, Local Networks and the Data Link Layer	119
5.5 Network Topologies, Physical and Logical	119
5.5.1 TCP and IP	119
5.6 Summary	119
5.7 References	119
Chapter 6 Programming and Computer Software.....	121
6.1 Application software and software development.	121
6.1.1 Software Engineering.....	121
6.1.2 Programming Languages	121
6.1.3 Compilers, Interpreters, and IDEs.....	121
6.2 Operating Systems	121
6.2.1 Functions of the Operating System	121
6.2.2 Process Dispatching	121
6.2.3 Interrupts and Concurrent Operation	121
6.2.4 Hardware Support and Privileged Instructions	121
6.2.5 File Management.....	121
6.2.6 Memory Management and Virtual Memory.....	121
6.2.7 Limits on Throughput	121
6.3 Virtualization	121

Table of Contents

6.4 Database Management Systems.....	121
6.5 Summary.....	121
6.6 References.....	121
Chapter 7 Information Security	123
7.1 What Does “Secure” Mean?	123
7.2 Properties of a Secure System.....	124
7.2.1 Confidentiality.....	125
7.2.2 Integrity	125
7.2.3 Availability	126
7.2.4 Properties, States, and Controls: the McCumber Model	126
7.2.5 Other “Properties”	127
7.3 Goals of an Information Security Program.....	127
7.4 Policy, Controls, and Procedures	128
7.5 Assets, Risks, and Risk Management	130
7.5.1 Identifying Assets and Threats.....	130
7.5.2 Risk Management	131
7.6 Identification, Authentication, and Access Control	133
7.7 Cryptography	136
7.7.1 Symmetric Key Cryptography.....	137
7.7.2 Asymmetric Key Cryptography and Key Exchange	138
7.7.3 Cryptographic Hashes and Digital Signatures	140
7.8 Summary.....	143
7.9 References.....	144
Chapter 8 Computing in the Twenty-First Century.....	147
8.1 High-Performance Computing.....	147
8.2 Artificial Intelligence and Machine Learning	147
8.3 Device Automation (And Robotics?).....	147
8.4 Internet of Things.....	147
8.5 Data Science.....	147
8.6 Quantum Computing.....	147
Appendix A. Programming LMC / TBC.....	149
8.7 Operation Codes.....	149
Appendix B. The TBC Control Unit.....	151
